## Multi Lock Automatic Coupler

Designed with operator and site safety in mind where attachment changes are completed safely without leaving the cab.

Both front and rear attachment pins are independently mechanically locked through the full working cycle, both front and rear attachment pins are independently hydraulically released by the coupler.

## Product Features and Benefits:

- Attachments are safely released and secured without manual intervention
- Both attachment pin locks are visible to machine operator for increased safety & reassurance.
- Sequential Cab Control System where 3 stages are required to release attachment eliminating unintentional, accidental release.
- Ranger style coupler for increased attachment size flexibility giving higher asset utilisation
- Hydraulic check valve fitted as standard for double safety redundancy
- Buckets can be attached in normal or back face position
- Heavy Duty certified lift eye for additional functionality
- Multi Lock Couplers to suit machines from 6 to 110 tonnes.
- Compliant to current legislation.
